[1] The first version of AutoCAD Crack was developed to provide CAD operators working at the drafting board with a set of tools and functionality similar to that available in 2D CAD software.[2] While initially only intended as a replacement for 2D drafting and drawing, in later versions, AutoCAD Activation Code has evolved into a general purpose CAD system for the manufacturing and construction industries, and is used for creating architectural blueprints, bills of materials, 3D mechanical designs, and graphical illustrations in a wide variety of fields. AutoCAD Download With Full Crack is mainly used for the creation of 2D drawings, 2.5D drafting and visualization, and 3D CAD design, as well as drafting and animation for movies. Objects The object in AutoCAD Crack Mac and AutoCAD Cracked Version LT consist of the following components: Class: Holds data about the object, along with a reference to the layer the object belongs to. Shape: Holds data about the outline of the object, along with the type of object and the Z position of the object (if it has any). Group: Holds the other objects that are grouped with the current object (similar to "children" in some computer programs). Text and TextStyle: Holds any text that is associated with the object (including labels, "fields", etc.). Drafting Components: Used by AutoCAD Activation Code only, this is a container that holds various information that describes a drawing component. Composition: A list of all the objects in the drawing, and their coordinate system. Drawing Components There are three different types of drawing components. They are described as follows: Drawing Objects: Objects that are stored in the database of the drawing. These objects can be placed in a drawing at any time. If an object is updated in the database, all the drawing components related to the object will be updated automatically. Component Objects: These objects represent drawing components of the drawing. They are the only objects that a user can delete or edit directly in a drawing. Drawing Templates: These objects are created by drawing components (or drawing objects) and they represent a placeholder for the drawing components (or drawing objects). They can be edited with the usual editing tools in the drawing components. All of the drawing components have a reference to the drawing and have a list of drawing components. Properties Properties describe attributes of an object in the drawing. They can be manually assigned to an object using the properties dialog box or the "Tools" or "Object tab" menu. Properties are defined at object creation time. They can be assigned to groups, layers, or any other type of object. Properties can also be defined at the drawing template level.
